Illan wall

The Illan wall lamp is formed by an element of die-cast aluminium attached to the wall, containing an LED source that emits a soft, warm glow upward. Attached to the casting, the structure in laser-cut layered wood, extremely thin and flexible (diameter 28 cm) clads the body of the lamp and determines the characteristic geometric design of Illan.

J-us

Luceplan presents an original vision of the traditional chandelier with arms, in which technological innovation, research on materials and new solutions for electrical conduction are completely hidden from view. The central structure is a cylinder with a diameter of 28 mm, which acts as a novel electrified track to accommodate the arms of the chandelier, assembled in a vast range of configurations. The arms are made in a layered material usually utilized to produce electrical circuits, allowing the current to flow in a practical and functional way.

koinè floor

Alfway between suspension lamp and a floor lamp, the new Koinè incorporates the technology and design of the suspension version, now equipped with an elegant structure consisting of a long and slender carbon stem, a cylindrical steel counterweight, and a foot dimmer. Available in matte black finish (Ø 55cm), Koinè floor adapts to different types of spaces thanks to the possibility of adjusting its inclination and height during setup.

Millimetro wall

The new wall version of Millimetro stands out for its form and its surprising luminous impact. It is composed of a mirror-finish metal disk installed adjacent to the wall. The LED light source contributes to create a warm atmosphere, and remains hidden from view. The body of the lamp thus seems to float in space, becoming part of the wall itself.
